

Codebook:**COMPARATIVE POLITICAL DATA SET 1960-2017**

Klaus Armingeon, Virginia Wenger, Fiona Wiedemeier, Christian Isler, Laura Knöpfel, David Weisstanner and Sarah Engler

The Comparative Political Data Set 1960-2017 (CPDS) is a collection of political and institutional data which have been assembled in the context of the research projects “Die Handlungsspielräume des Nationalstaates” and “Critical junctures. An international comparison” directed by Klaus Armingeon and funded by the Swiss National Science Foundation. This data set consists of (mostly) annual data for 36 democratic OECD and/or EU-member countries for the period of 1960 to 2017. In all countries, political data were collected only for the democratic periods.¹ The data set is suited for cross-national, longitudinal and pooled time-series analyses.

The present data set combines and replaces the earlier versions “Comparative Political Data Set I” (data for 23 OECD countries from 1960 onwards) and the “Comparative Political Data Set III” (data for 36 OECD and/or EU member states from 1990 onwards). A variable has been added to identify former CPDS I countries.

For additional detailed information on the composition of government in the 36 countries, please consult the “Supplement to the Comparative Political Data Set – Government Composition 1960-2017”, available on the CPDS website.

The Comparative Political Data Set contains some additional demographic, socio- and economic variables. However, these variables are not the major concern of the project and are thus limited in scope. For more in-depth sources of these data, see the online databases of the OECD, Eurostat or AMECO.

When using data from this data set, please quote both the data set and, where appropriate, the original source. Please quote this data set as:

Armingeon, Klaus, Virginia Wenger, Fiona Wiedemeier, Christian Isler, Laura Knöpfel, David Weisstanner and Sarah Engler. 2019. *Comparative Political Data Set 1960-2017*. Bern: Institute of Political Science, University of Berne.

Last updated: 2019-08-15

¹ Political data are not collected for non-democratic periods and thus missing for Greece during the period 1968-1973; for Portugal until 1975; Spain until 1976; Bulgaria, Czech Republic, Hungary, Romania and Slovakia until 1989; Poland until 1990; Estonia and Lithuania until 1991; Latvia and Slovenia until 1992; and missing for Croatia until 1999. Political data collection in Malta starts in 1966 after its independence in 1964. In the case of Cyprus it starts in 1976 after its division in 1974.

VARIABLE LIST

1. General variables

year	Year of observation
country	Country names
countryn	Country code numbers: 1 Australia, 2 Austria, 3 Belgium, 4 Bulgaria, 5 Canada, 6 Croatia, 7 Cyprus (Greek part), 8 Czech Republic, 9 Denmark, 10 Estonia, 11 Finland, 12 France, 13 Germany, 14 Greece, 15 Hungary, 16 Iceland, 17 Ireland, 18 Italy, 19 Japan, 20 Latvia, 21 Lithuania, 22 Luxembourg, 23 Malta, 24 Netherlands, 25 New Zealand, 26 Norway, 27 Poland, 28 Portugal, 29 Romania, 30 Slovakia, 31 Slovenia, 32 Spain, 33 Sweden, 34 Switzerland, 35 United Kingdom, 36 USA.
iso	International Standard for country codes: ISO 3166-1 code (ALPHA-3). ISO country codes: AUS Australia, AUT Austria, BEL Belgium, BGR Bulgaria, CAN Canada, HRV Croatia, CYP Cyprus (Greek part), CZE Czech Republic, DNK Denmark, EST Estonia, FIN Finland, FRA France, DEU Germany, GRC Greece, HUN Hungary, ISL Iceland, IRL Ireland, ITA Italy, JPN Japan, LVA Latvia, LTU Lithuania, LUX Luxembourg, MLT Malta, NLD Netherlands, NZL New Zealand, NOR Norway, POL Poland, PRT Portugal, ROU Romania, SVK Slovakia, SVN Slovenia, ESP Spain, SWE Sweden, CHE Switzerland, GBR United Kingdom, USA USA.
iso3n	International Standard for country codes: ISO 3166-1 numeric code (numeric-3). ISO numeric country codes: 36 Australia, 40 Austria, 56 Belgium, 100 Bulgaria, 124 Canada, 191 Croatia, 196 Cyprus (Greek part), 203 Czech Republic, 208 Denmark, 233 Estonia, 246 Finland, 250 France, 276 Germany, 300 Greece, 348 Hungary, 352 Iceland, 372 Ireland, 380 Italy, 392 Japan, 428 Latvia, 440 Lithuania, 442 Luxembourg, 470 Malta, 528 Netherlands, 554 New Zealand, 578 Norway, 616 Poland, 620 Portugal, 642 Romania, 703 Slovakia, 705 Slovenia, 724 Spain, 752 Sweden, 756 Switzerland, 826 United Kingdom, 840 USA.

Codebook: Comparative Political Data Set, 1960-2017

cpds1	Dummy variable with value 1 for former “Comparative Political Data Set I” countries, covering 23 OECD countries starting in 1960.
poco	Dummy variable with value 1 for post-communist countries (Bulgaria, Croatia, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovakia, Slovenia).
eu	Dummy variable with value 1 for member states of the European Union (since year of accession).
emu	Dummy variable with value 1 for member states of the Economic and Monetary Union (EMU) of the European Union (since year of accession).

Note:

1. For former communist countries, as well as for Portugal and Spain, political data were gathered starting with the first free elections. For Greece, political data are available before 1967 and interrupted during the military dictatorship 1967-1973. For Cyprus, data begin with the first election after its division. For Malta, political data were gathered starting with the first election after its independence.
2. *Germany*: Data up to the end of 1990 are for the Federal Republic of Germany before reunification only (West Germany); unless otherwise indicated, data cover all of Germany from 1991 onwards.

2. Governments

Note:

For detailed information on government data (party composition, reshuffles, duration, reason for termination and the type of government) please consult the “Supplement to the Comparative Political Data Set – Government Composition” available on the Comparative Political Data Set website.

gov_right1	<p>Government composition: cabinet posts of right-wing parties in percentage of total cabinet posts. Weighted by the number of days in office in a given year.</p> <p><u>Period covered</u>: 1960-2017.</p> <p><u>Missing</u>: None.</p> <p><u>Source</u>: Own calculations primarily based on Schmidt and Beyer (1992); from 1991 on from the political data published in the European Journal of Political Research (Political Data Yearbook, various issues). For details see Appendix 1, for the classification of parties into “left”, “centre” or “right” parties see Appendix 2.</p>
gov_cent1	<p>Government composition: cabinet posts of centre parties in percentage of total cabinet posts. Weighted by the number of days in office in a given year.</p> <p><u>Period covered</u>: 1960-2017.</p> <p><u>Missing</u>: None.</p> <p><u>Source</u>: See variable ‘gov_right1’.</p>
gov_left1	<p>Government composition: cabinet posts of social democratic and other left parties in percentage of total cabinet posts. Weighted by the number of days in office in a given year.</p> <p><u>Period covered</u>: 1960-2017.</p> <p><u>Missing</u>: None.</p> <p><u>Source</u>: See variable ‘gov_right1’.</p>

Notes:

1. Due to independents in government or non-partisan/technocratic governments, the calculations of ‘gov_right1’, ‘gov_cent1’ and ‘gov_left1’ do not always add up to 100 per cent.

Codebook: Comparative Political Data Set, 1960-2017

2. In countries where the democratic transition started later than in 1960, the calculations of government composition in the first year do not start on the 1st January. Instead, calculations start with the investiture date of the first democratic government. Thus the variables can still add up to 100 percent.

gov_party Cabinet composition (Schmidt-Index): (1) hegemony of right-wing (and centre) parties ($\text{gov_left1}=0$), (2) dominance of right-wing (and centre) parties ($0<\text{gov_left1}\leq 33.33$), (3) balance of power between left and right ($33.33<\text{gov_left1}<66.67$), (4) dominance of social-democratic and other left parties ($66.67\leq\text{gov_left1}<100$), (5) hegemony of social-democratic and other left parties ($\text{gov_left1}=100$).

Period covered: 1960-2017.

Missing: Bulgaria 1993/94, Italy 2012, Romania 2015/16 (full technocratic governments, Partisan caretaker governments).

Source: Own calculations according to Schmidt (1992).

Notes:

1. Where the sum of 'gov_left', 'gov_cent' and 'gov_right' is not equal to 100 percent due to independents, the boundaries for the three groups were recalculated for the codes (2), (3) and (4) by taking the sum of the given entries as 100 percent. For example, *Portugal 2005*:

$\text{gov_right} + \text{gov_cent} + \text{gov_left} = 61.12$.

The total of 61.12 percent is the basis for the calculation of the new boundaries. $61.12/3 = 20.37$ is in this case the new boundary for the lower third, replacing 33.3 percent. $20.37*2 = 40.75$ would be the new boundary for the upper third, replacing 66.6 percent.

As $\text{gov_left} = 42.64$, which is a higher value than the boundary for the upper third ($=40.75$), a (4) was entered.

gov_new New ideological composition of cabinet: (0) no change, (1) change: if cabinet ideological composition (**gov_party**) changed from last to present year.

Period covered: 1960-2017.

Missing: Bulgaria 1993/94, Italy 2012 Romania 2015/16 (full technocratic governments, Partisan caretaker governments).

Source: Own calculations based on the variable 'gov_party'.

gov_gap 'Ideological gap' between new and old cabinets. The gap is calculated as the difference of the index value (**gov_party**) between the incoming and the outgoing governments. For an example, see the note below.

Period covered: 1960-2017.

Missing: Bulgaria 1993/94, Italy 2012 Romania 2015/16 (full technocratic governments, Partisan caretaker governments).and first years of countries with democratic transition later than 1960.

Source: Own calculations based on the variable 'gov_party'.

Note:

1. How to calculate 'gov_gap' (an example): The cabinet in Australia in 1996 is coded (2) for the variable 'gov_party' (dominance of right- and centre parties). As in 1995, the government of Australia had a hegemony of social-democratic and other left parties, coded (5) for the variable 'gov_party', the value for 'gov_gap' in 1996 would thus be (-3), calculated as the difference in the ideologies of the outgoing (2) and the incoming governments (5).

gov_chan Number of changes in government per year [termination of government due to (a) elections, (b) voluntary resignation of the Prime Minister,

Codebook: Comparative Political Data Set, 1960-2017

(c) resignation of Prime Minister due to health reasons,
 (d) dissension within government (break up of the coalition),
 (e) lack of parliamentary support,
 (f) intervention by the head of state, or
 (g) broadening of the coalition (inclusion of new parties)
 (Woldendorp/Keman/Budge 2000: 16-17)].

Period covered: 1960-2017.

Missing: None.

Source: 1960-1994: Woldendorp/Keman/Budge (1998, 2011); 1995 onwards (USA from 1991 onwards): own calculations based on European Journal of Political Research (Political Data Yearbook, various issues).

gov_right2 Government composition: relative power position of right-wing parties in government based on their seat share in parliament, measured in percentage of the total parliamentary seat share of all governing parties. Weighted by the number of days in office in a given year.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

gov_cent2 Government composition: relative power position of centre parties in government based on their seat share in parliament, measured in percentage of the total parliamentary seat share of all governing parties. Weighted by the number of days in office in a given year.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

gov_left2 Government composition: relative power position of social democratic and other left parties in government based on their seat share in parliament, measured in percentage of the total parliamentary seat share of all governing parties. Weighted by the number of days in office in a given year.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

Notes:

1. Changes in the composition of the parliament are not entered until there has been a change in government.
2. For some calculations the total weight does not amount to 100 percent due to non-partisan/technocratic governments in office.

gov_right3 Government support: parliamentary seat share of right-wing parties in government. Weighted by the number of days in office in a given year.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

gov_cent3 Government support: parliamentary seat share of centre parties in government. Weighted by the number of days in office in a given year.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

Codebook: Comparative Political Data Set, 1960-2017

gov_left3 Government support: parliamentary seat share of social democratic and other left parties in government. Weighted by the number of days in office in a given year.
Period covered: 1960-2017.

Missing: None.

Source: See variable 'gov_right1'.

Note:

1. Changes in the composition of the parliament are not entered until there has been a change in government.

gov_sup Total government support: seat share of all parties in government. Weighted by the numbers of days in office in a given year.

Period covered: 1960-2017.

Missing: none.

Source: See variable 'gov_right1'.

gov_type Type of government based on the following classification:

- (1) Single-party majority government:
One party takes all governments seats and has a parliamentary majority [>50.0%].
- (2) Minimal winning coalition:
All participating parties are necessary to form a majority government [>50.0%].
- (3) Surplus coalition:
Coalition governments which exceed the minimal-winning criterion [>50.0%].
- (4) Single-party minority government:
The party in government does not possess a majority in Parliament [≤50.0%].
- (5) Multi-party minority government:
The parties in government do not possess a majority in Parliament [≤50.0%].
- (6) Caretaker government:
Governments which should simply maintain the status quo.
- (7) Technocratic government:
Led by technocratic prime minister, consists of a majority of technocratic ministers and is in possession of a mandate to change the status quo.

Period covered: 1960-2017.

Missing: None.

Source: 1960-1994: Woldendorp/Keman/Budge (1998, 2011); post-communist countries: Berglund et al. (2013); 1995 onwards (USA from 1991 onwards): own calculations based on European Journal of Political Research (Political Data Yearbook, various issues) according to the definitions of Woldendorp/Keman/Budge (2000: 17f.), and McDonnell/Valbruzzi (2014: 11) for the last two categories.

Notes:

1. The indicator refers to the type of government that was in office for the longest period each year.
2. Caretaker governments are governments which should simply maintain the status quo (Golder 2010: 4). Mostly the ministers of such governments, including the prime minister, belong to a specific party. However, in a few cases the governments consist of nonpartisan technocratic ministers. We still code these governments as caretaker governments as long as their mandate does not exceed the remit "to mind the shop".
3. Based on McDonnell and Valbruzzi (2014: 11), we define a technocratic government as a government which is led by technocratic prime minister, consists of a majority of technocratic ministers and is in possession of a mandate to change the status quo. In a few cases, only the minority of ministers are technocrats. However, as long as the first and

Codebook: Comparative Political Data Set, 1960-2017

third criterion (technocratic prime minister and mandate to change the status quo) are fulfilled, we still code these governments as technocratic.

Following McDonnel and Valbruzzi (2014: 4) we classify a prime minister as a being a technocrat if „*at the time of his/her appointment to government, he/she: (1) has never held public office under the banner of a political party; (2) is not a formal member of any party; (3) is said to possess recognized non-party political expertise which is directly relevant to the role occupied in government*” (McDonnel and Valbruzzi 2014: 4-5).

4. If a single party's seat share is exactly 50%, we code the government as a single party minority government. If two governmental parties possess combined 50% of the seat share we code the government as a multi party minority government. If the government consists of three parties where the two biggest ones hold 50% of the seat share we code the government as a minimal winning coalition one.
5. Sister parties count as one party for the classification of the type of government (for example the CDU and CSU in Germany).
6. We classify the governments of Cyprus and the United States continuously as single party majority governments due to the countries' presidential system.

3. Elections

elect Date of election of national parliament (lower house). (If there were two elections in a year, the date of the second is given).

Period covered: 1960-2017.

Missing: None.

Source: European Journal of Political Research (Political Data Yearbook, various issues); Mackie & Rose (1991); Bugajski (2002); Keesing's Archive; Parliaments and governments database (<http://www.parlgov.org/explore>); Parline database (<http://www.ipu.org/parline-e/parlinesearch.asp>).

Note:

1. For former communist countries the entries generally start with the year when the first free elections were held. An exception is the inclusion of the 1990 Slovenian elections. Although at the time of these elections, Slovenia was still part of the Yugoslav federation, the significance of the decisions taken by the Parliament formed after these elections has led some authors to consider them “founding elections” (e.g. Klingemann et al. 2000). The elections of the Federal Assembly of Czechoslovakia 1990 and 1992 are included as well since the Czech and the Slovakian parts of the Federation voted separately for their own candidates. The 1992 elections produced the Parliaments which ruled after the two countries peacefully separated on 1st January 1993.
2. *Greece 2012:* From the two elections in 2012 (06. May and 17. June), only the results of the second one on 17. June are entered.

vturn Voter turnout in election.
Period covered: 1960-2017.
Missing: None.
Source: See variable 'elect'.

social1 Share of votes of the party classified as 'social1'.
social2 Share of votes of the party classified as 'social2'.
(etc.)

Period covered: 1960-2017.

Missing: None.

Source: See variable 'elect'. Parties are classified based on Lane, McKay and Newton (1997). For details about the classification and the period covered for each country, see the Appendix 3.

Codebook: Comparative Political Data Set, 1960-2017

As a general rule, we include data on votes and seats for a party if it reached at least 2% of the vote share in an election. If it did not reach that threshold, data for this party was not entered for this election (neither on votes nor on seats); rather it received a zero (see Appendix 3).

List of party family labels:

social1-social8, leftsoc1-leftsoc5, comm1-comm4, postcom1-postcom2, agrarian1-agrarian3, conserv1-conserv8, relig1-relig7, liberal1-liberal9, protest1-protest5, green1-green3, ethnic1-ethnic4, right1-right5, regio1, femin1, monarch1, person1, pension1-pension2, nonlbl1-nonlbl2, allia1-allia3, others.

Notes:

1. For *Italy (1993-2005)*, *Germany*, *Lithuania* and *New Zealand* (since 1994), the share of votes represents the share of votes received on party lists (proportional part of the electoral system). For the parallel system of Japan, the percentage of votes represents the mean of votes in single-seats districts and in proportional representation constituencies.
2. *Slovenia 1996-2006*: The National Assembly also includes two seats (one seat each) reserved for the Italian and Hungarian minorities (ethnic1 and ethnic2) that are only elected by members of those minorities.
3. 'others' and 'sothers' are residual categories. They cover the difference of entries on votes or seats of the sum of all other categories compared to 100 percent.
4. In bicameral systems, data is taken for the lower house.

ssocial1
ssocial2
(etc.)

Share of seats in parliament for the party classified as 'social1'.

Share of seats in parliament for the party classified as 'social2'.

Period covered: 1960-2017.

Missing: None.

Source: See variable 'elect'. Parties are classified based on Lane, McKay and Newton (1997). For details about the classification and the period covered for each country, see the Appendix 3.

As a general rule, we include data on votes and seats for a party if it reached at least 2% of the vote share in an election. If it did not reach that threshold, data for this party was not entered for this election (neither on votes nor on seats); rather it received a zero (see Appendix 3).

List of party family labels:

ssocial1-ssocial8, sleftsoc1-sleftsoc5, scomm1-scomm4, spostcom1-spostcom2, sagrarian1-sagrarian3, sconserv1-sconserv8, srelig1-srelig7, sliberal1-sliberal9, sprotest1-sprotest5, sgreen1-sgreen3, sethnic1-sethnic4, sright1-sright5, sregio1, sfemin1, smonarch1, sperson1, spension1-spension2, snonlbl1-snonlbl2, sallia1-sallia3, sothers.

Note:

1. In bicameral systems, data is taken for the lower house.

womenpar Percentage of women in parliaments. Entries refer to the composition of the parliament at the end of the corresponding year.

Period covered: 1960-2017.

Missing: Czech Republic, Slovakia and Slovenia: 1990/91.

Source: Inter-Parliamentary Union (1995, 1997); Inter-Parliamentary Union Homepage (<http://www.ipu.org/wmn-e/classif-arc.htm>) (Downloaded: 2019-06-15).

Note:

1. In bicameral systems, data is taken for the lower house.
2. *Croatia 2003*: Data corresponds to the month of November.

Codebook: Comparative Political Data Set, 1960-2017

4. Party system

Note:

For the calculation of party system indicators, the vote and seat shares of independents and very small parties grouped under the category 'others' were neglected. The construction of the indices is such that independents and very small parties tend to be ignored, because parties are weighted by their vote/seat shares (see also Lijphart 2012: 73, footnote 7).

rae_ele Index of *electoral* fractionalization of the party system according to the formula proposed by Rae (1968):

$$rae_ele = 1 - \sum_{i=1}^m v_i^2, \text{ where } v_i \text{ is the share of votes for party } i \text{ and } m \text{ the number}$$

of parties (without the category 'others'). The index can take values between 1 (maximal fractionalization) and 0 (minimal fractionalization).

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

rae_leg Index of *legislative* fractionalization of the party system according to the formula proposed by Rae (1968):

$$rae_leg = 1 - \sum_{i=1}^m s_i^2, \text{ where } s_i \text{ is the share of seats for party } i \text{ and } m \text{ the number}$$

of parties (without the category 'sothers'). The index can take values between 1 (maximal fractionalization) and 0 (minimal fractionalization).

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

effpar_ele Effective number of parties on the *votes* level according to the formula [N₂] proposed by Laakso and Taagepera (1979). The effective number of parties uses the same information as the Rae-Index and is calculated from this index as follows:

$$effpar_ele = 1 / (1 - rae_ele)$$

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

effpar_leg Effective number of parties on the *seats* level according to the formula [N₂] proposed by Laakso and Taagepera (1979). The effective number of parties uses the same information as the Rae-Index and is calculated from this index as follows:

$$effpar_leg = 1 / (1 - rae_leg)$$

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

dis_abso Index of absolute disproportionality. For example, a score of 1 means that on the *seats* level there is, on average, one (effective) party less than on the *votes* level. 'Absolute' refers to the calculation of the differences between the effective number of parties in elections and parliaments without taking the fractionalization of the party system into account. The more fractionalized a party system, the greater the likelihood – ceteris paribus – of high values of *dis_abso*.

The index is calculated as follows:

$$dis_abso = effpar_ele - effpar_leg$$

Codebook: Comparative Political Data Set, 1960-2017

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

dis_rel Index of relative disproportionality. This index is weighted by the total number of parties on the *votes* level. It is calculated as follows:

$$dis_rel = (effpar_ele - effpar_leg) / effpar_ele$$

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

dis_gall Index of disproportionality according to the formula [least squares] proposed by Gallagher (1991). Calculated as follows:

$$dis_gall = \sqrt{\frac{1}{2} \sum_{i=1}^m (v_i - s_i)^2} \text{ , where } v_i \text{ is the share of } votes \text{ for party } i, s_i \text{ is the}$$

share of *seats* for party *i* and *m* the number of parties

Period covered: 1960-2017.

Missing: None.

Source: Own calculations.

5. Institutions

The variables 'lfirst' to 'lbank' come from Lijphart (2012: 305-309). They concern two dimensions of consensus democracies. The value for the period 1945-2010 is entered in 1960; the value for the period 1981-2010 is entered in 1981. For definition of the variables, see Lijphart (2012). The index of central bank independence ('lbank') covers only the periods 1945-1994 and 1981-1994. The first years analyzed vary by country (for further information see Lijphart 2012: 49).

lfirst	First (executives-parties) dimension
lsec	Second (federal-unitary) dimension
leff	Effective number of parliamentary parties
lmin	Minimal winning one-party cabinets (%)
lexe	Index of executive dominance
ldis	Index of disproportionality (%)
lint	Index of interest group pluralism
lfed	Index of federalism
lbic	Index of bicameralism
lrid	Index of constitutional rigidity
ljud	Index of judicial review
lbank	Index of central bank independence

Period covered: 1945-2010 (central bank independence: 1945-1994).

Missing: Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovakia, Slovenia.

Source: Lijphart (2012: 305-309).

lfirstp Lijphart's first dimension. Time-variant proxy variable (for details see Appendix 5).

Source: Own calculations.

instcons Index of institutional constraints of central state government according to Schmidt (1996); Minimum value = 0; Maximum value = 6; Range of data: 0 to 5, with high values indicating powerful constraints and low values indicating that the central government has a great deal of room for maneuverability.
 Description: additive index composed of 6 dummy variables ('1' = constraints, '0' = else): (1) EU membership = 1, (2) degree of centralisation of state structure (federalism = 1), (3) difficulty of amending constitutions (very difficult = 1) (4) strong bicameralism = 1 (5) central bank autonomy = 1 (6) frequent referenda = 1.
Source: Schmidt (1996: 172) transformed into time variant annual data. Data for central bank autonomy taken from Beyeler (2007: 123).
Period covered:

structur Augmented index of constitutional structures based on Huber/Ragin/Stephens (1993: 728); we turned the time-invariant variable into a time-variant variable by adjusting for institutional changes, e.g. the Belgian shift to federalism in 1993. Countries not covered by Huber et al. (1993) were classified according to Huber et al. using information from national sources or comparative analyses such as Schmidt (1996).
 Description: Additive index composed of five indicators: (1) federalism (0 = absence, 1 = weak, 2 = strong), (2) parliamentary government = 0, versus presidentialism or other = 1, (3) proportional representation = 0, modified proportional representation = 1, majoritarian = 2, (4) bicameralism (0 = no second chamber or second chamber with very weak powers, 1 = medium strength bicameralism, 2 = strong bicameralism), (5) frequent referenda = 1.
Period covered: 1960-2017.
Missing: None.
Source: Own calculations based on Huber/Ragin/Stephens (1993).

Codebook: Comparative Political Data Set, 1960-2017

- fed** Federalism. Coded: 0 = no; 1 = weak; 2 = strong.
Period covered: 1960-2017.
Missing: None.
Source: Huber et al. (2004); national sources and constitutions.
- Note:**
1. Spain is classified as a strong federal state, although formally it is a unitarian one.
- pres** Executive-legislative relations according to Lijphart (2012: 108ff.). Coded: 0 = parliamentary system; 1 = semi-presidential dominated by parliament; 2 = hybrid system; 3 = semi-presidential dominated by president; 4 = presidential system.
Period covered: 1960-2017.
Missing: None.
Source: Lijphart (2012); Huber et al. (2004); Ismayr (2003, 2006, 2010); national sources and constitutions; EJPR Political Data Yearbook (various issues).
- Note:**
1. In addition to a parliamentary prime minister, a semi-presidential system (= 1 or 3) also has a popularly elected president (Lijphart 2012: 109).
 2. Changes are entered in the year of the first (parliamentary or presidential) elections under the new rules.
 3. *France:* During cohabitation France is defined as a semi-presidential system dominated by parliament (= 1), otherwise as a semi-presidential system dominated by president (= 3).
 4. *Switzerland:* Switzerland is the only system classified as hybrid, since the collegial executive elected by the legislative does not depend on legislative confidence
- prop** Electoral system: single member districts or proportional representation. Coded 0 = single-member, simple plurality systems; 1 = modified proportional representation (parallel plurality PR-systems, majority-plurality/alternative vote); 2 = proportional representation (PR).
Period covered: 1960-2017.
Missing: None.
Source: Inter-Parliamentary Union; Ismayr (2003); Lijphart (2012); national sources and constitutions; EJPR Political Data Yearbook (various issues).
- Note:**
1. Changes are entered in the year of the first election under the new electoral rules.
 2. Countries with generally proportional representation but majority vote in a few districts (e.g. in the Spanish Enclaves Ceuta and Melilla or in the small Swiss cantons with only one representative) are simply counted according to Lijphart (1999) as countries with proportional representation systems.
 3. The difference between the mixed member proportional formula and the parallel plurality-PR system (semiproportional formula) is that in the parallel system no compensation exists for any disproportionality produced by the single-member district results.
- bic** Index of bicameralism according to Lijphart (2012). Coded 1 = unicameralism; 2 = weak bicameralism (asymmetrical and congruent chambers); 3 = medium strength bicameralism (asymmetrical and incongruent or symmetrical and congruent); 4 = strong bicameralism (symmetrical and incongruent).
Period covered: 1960-2017.
Missing: None.
Source: Lijphart (2012), Ismayr (2003), constitutions and European Journal of Political Research, various issues.

Codebook: Comparative Political Data Set, 1960-2017

Notes:

1. The term “incongruent” is used when the second chamber is elected by different methods and has the purpose of overrepresenting certain minorities. The term “symmetrical” refers to equal or moderately unequal constitutional powers and democratic legitimacy.
2. *Austria* and *Belgium*: In the Austrian Bundesrat and the Belgian Senate, the degree of overrepresentation is so slight that they can almost be regarded as proportionally apportioned chambers. Therefore, they should be classified as congruent with their first chamber (Lijphart 2012: 194).
3. *Belgium*: With the new federal Constitution of 1994, the lower house received more powers relative to the Senate (Art. 74 Cst.). Since the shared competences (Art. 77) are of fundamental importance for the federal state, Belgium is still considered as having medium-strength bicameralism.
4. *Iceland* (until 1991) and *Norway* (until 2009): Both are coded as 1.5 (one-and-a-half chambers), because although the legislators are elected as one body, after elections they divide themselves into two chambers (Lijphart 2012: 189).
5. *United Kingdom*: The British case is coded as 2.5 (between medium-strength and weak bicameralism) because the upper house is a “relict of a predemocratic era” (Lijphart 2012: 201).

referen Referendum. Coded 0 = None or infrequent, 1 = frequent.

Period covered: 1960-2017.

Missing: None.

Source: Huber et al. (2004); and information from national sources and comparative analyses.

dir Index of direct democratic power dispersion (initiatives and referendums). The index contains points for the degree of majoritarianism or consensualism in the direct democratic provisions in the constitution and embodied in the decision rules as well as for the actual use of direct democracy. “Uncontrolled” referendums, i.e. optional referendums and initiatives score 1 point each if prescribed by the constitution. Plebiscites (ad hoc referendums), which are subject to the discretion of the head of governments score a negative point each if prescribed by the constitution. As an intermediate form, 0 points are given for mandatory referendums. 0.5 points awarded for each variant of direct democracy when a quorum of participation is required and 1 point when a qualified majority is required. 1 point is awarded for the actual use of mandatory referendums, optional referendums and popular initiatives, and a negative point for the use of plebiscites.

judrev Judicial review (existence of an independent body which decides whether laws are conform to the constitution). Coded 0 = no, 1 = yes.

Period covered: 1960-2017.

Missing: None.

Source: Huber et al. (2004), Lijphart (2012), Ismayr (2003), constitutions and European Journal of Political Research, various issues.

Note:

1. While the a body of judicial review has existed in *Poland* since 1982, until the end of the Small Constitution in 1996, it was subordinate to the parliament (Ziemer/Matthes 2006:236). Therefore, Poland was not considered to have an independent body under the Small Constitution and gets a zero (0) until 1996.
2. *Romania*: The decision of the Constitutional Court can be overruled by the Parliament: Article 145 [Procedure in Cases of Unconstitutionality], Constitution of Romania, 1991: "(1) In cases of unconstitutionality, in accordance with Article 144 (a) and (b), the law or orders shall be returned for reconsideration. If the law is passed again in the same formulation by a majority of at least two-thirds of the members of each chamber, the objection of unconstitutionality shall be overturn, and promulgation thereof shall be binding."

6. Openness of the economy

kaopen Index for the degree of openness in capital account transactions. The index incorporates a variable indicating the presence of multiple exchange rates, a second variable indicating restrictions on current account transactions, a third variable indicating restrictions on capital account transactions and a fourth variable indicating the requirement of the surrender of export proceeds. The higher the value, the more open a country is to cross-border capital transactions. The index is normalized to a range between 0 (minimal openness) and 1 (maximal openness).

debt_hist

Gross general government debt (financial liabilities) as a percentage of GDP. The data from the variable "debt" is complemented with historical data from the IMF and, in a few cases, from Reinhart and Rogoff (2009). Missings in the variable debt are extrapolated using these additional sources.

Source: see variable "debt". In addition: Abbas, S.M. Ali, Nazim Belhocine, Asmaa El-Ganainy and Mark Horton (2010) "[A Historical Public Debt Database](#)", IMF

Codebook: Comparative Political Data Set, 1960-2017

Working Paper WP/10/245, Washington, DC (Downloaded: 2015-03-16). Reinhart, Carmen M. and Kenneth S. Rogoff (2009) *This Time Is Different. Eight Centuries of Financial Folly*. "[Debt-to-GDP Ratios](#)" (Downloaded: 2015-03-16).

Period covered: see variable "debt". In addition, missings in the variable "debt" that were filled up with historical sources:

AUS 1960-1988	CZE 1993-1994	LVA 1994	ROU 1990-1994
AUT 1960-1969	DNK 1960-1979	LTU 1994	SVK 1992-1994
BEL 1960-1969	FRA 1960-1968	MLT 1980-1994	SVN 1993-1994
BGR 1990-1969	HUN 1990	NZL 1960-1992	SWE 1960-1969
CAN 1960	IRL 1960-1973	NOR 1960-1969	CHE 1960-1989
HRV 2000-2001	JPN 1960-1970	POL 1991-1994	GBR 1960

Notes:

1. Where available, the data is identical to the variable "debt" (see exact sources above).
2. Where the variable "debt" was missing, change rates from the IMF historical data were used to extrapolate from the values of the variable "debt". In a few cases, the IMF data contained small gaps. Then, the change rates from the data from Reinhart and Rogoff (2009) were used to interpolate the gaps in the IMF data. The goal of this variable is to preserve the levels of the variable "debt" but maximize the number of observations available.
3. Please note that there are partially grave differences in operationalization between the sources used. E.g., the IMF often reported *central* government debt when *general* government debt data was not available. Therefore the researcher should be very careful to consider breaks in the time series.

deficit Annual deficit (overall balance / net lending of general government) as a percentage of GDP.

Source: OECD (2019), "OECD Economic Outlook No. 105", OECD Economic Outlook: Statistics and Projections (database) (Downloaded: 2019-05-23). For countries which are not OECD members, namely Bulgaria, Croatia, Cyprus, Latvia, Lithuania, Malta and Romania, data were calculated from Eurostat ([Government deficit/surplus, debt and associated data](#)) (Downloaded: 2019-06-03).

Notes:

1. Long-term (in most cases 10 year) government bonds are the instrument whose yield is used as the representative 'interest rate' for this area. Generally, the yield is calculated at the pre-tax level and before deductions for brokerage costs and commissions and is derived from the relationship between the present market value of the bond and that at maturity, also taking into account interest payments paid through to maturity (see OECD, Main Economic Indicators: Sources and Definitions).
2. *Estonia 1998-2010, Germany 1960-90, Greece 1973-88/92-94, Hungary 1999, Ireland 1971-89, Luxembourg 1973-99*: Data is taken from AMECO (see source above).

DNK 1960-2017	ITA 1960-2008	POL 1992-2017	USA 1960-2015

Note:

1. Ideally, the lost working days are set in relation to the dependent labour force (persons employed), so the labour force should be adjusted to unemployed and self-employed persons. Due to limited availability of data on civilian employment, we use the total labour force in the denominator, though. With a few exceptions for most recent years, data on total labour force is available for all countries and years. Using the available data on civilian employment, the correlation between the measure based on civilian employment and the measure based on total labour force is 0.99.
2. Additional missing values (*): Czech Republic 1997-2008; Estonia 2002, 2004, 2010; Finland 2009/10; France 1968, 2013; Hungary 2008-11, 2013-15; Latvia 2014, 2016; Lithuania 2009-11, 2013, 2015; Luxembourg 1994-2005; Malta 1999, 2010; Netherlands 2014/15; New Zealand 2008; Norway 2009-12, 2014; Portugal 1978, 1981, 2008-11; Slovakia 1996, 2013/14; Sweden 2014-16; United Kingdom 2016.

DNK 1986-2015	ITA 1990-2015	POL 1991-2014	USA 1985-2017

Codebook: Comparative Political Data Set, 1960-2017

Notes:

1. For non-members of the OECD (Bulgaria, Croatia, Cyprus, Latvia, Lithuania, Malta and Romania), Eurostat includes data on some components of active labour market programmes under the function "unemployment expenditure" (variable 'unemp_pmp'). In order to avoid double inclusion of data on active labour market policies, these countries are coded get missing values. We provide more detailed data on active labour market policies from a different Eurostat source in the section "Labour market policy", however.
2. *USA 1985*: Data is taken from previous release of the OECD Social Expenditure Statistics database (Downloaded: 2016-07-28).

unemp_pmp Cash expenditure for unemployment benefits as a percentage of GDP (public and mandatory private).
Source: See variable 'socexp_t_pmp'.
Period covered: See variable 'socexp_c_pmp'. Additional data: Hungary 1992-98; Norway 1986/87. Additional missing values: Czech Republic 1990; Denmark 2012-15; Estonia 1999; France and Ireland 1980-84.

Notes:

1. For non-members of the OECD (Bulgaria, Croatia, Cyprus, Latvia, Lithuania, Malta and Romania), we used Eurostat data. However, these Eurostat data on unemployment benefits also include some components of active labour market programmes. For all other countries (covered by the OECD), data on active labour market programmes are included separately in the variable 'almp_pmp'.
2. *Denmark*: Data is taken from OECD (2016), "Social Expenditure: Aggregated data"

housing_pmp Total public and mandatory private expenditure on housing as a percentage of GDP.
Source: See variable 'socexp_t_pmp'.
Period covered: See variable 'socexp_c_pmp'. Additional missing values: Belgium 1980-99; Czech Republic 1990-93.

othsocx_pmp Public and mandatory private expenditure on other social policy areas as a percentage of GDP.
Source: See variable 'socexp_t_pmp'.
Period covered: See variable 'socexp_c_pmp'. Additional missing values: Denmark 1980-82; France 1980-88.

11. Educational expenditure and attainment data

Notes:

1. There may be differences in the classification between sources.
2. Please consider that there may be breaks in series.

educexp_gov General government expenditure on education (current, capital and transfers) as a percentage of GDP. It includes expenditure funded by transfers from international sources to government. General government usually refers to local, regional and central governments.
Source: The World Bank (2019), "[World Development Indicators](#)", People - Education inputs (Table 2.7) (Downloaded: 2019-07-25).

Note:

1. Specific requirements for collective dismissals are not included.
2. *Croatia 2015*: Data is taken from OECD (2017), "[Annual time series data 1985-2013](#)"

emprot_temp Employment protection strictness provided through legislation and as a result of enforcement processes (scale of 0-6; higher values indicate stricter employment protection). This indicator measures the strictness of regulation on the use of fixed-term and temporary work agency contracts.

Source: See variable 'emprot_reg'.

Period covered: See variable 'emprot_reg'.

Note:

1. *Croatia 2015*: Data is taken from OECD (2017), "[Annual time series data 1985-2013](#)"

14. Income inequality

prefisc_gini Gini index of pre-fisc income (before taxes and transfers) among household members aged 18-65, in percent.

Period covered: 1967-2017. Data available in survey waves every few years.

Source: *Luxembourg Income Study Database (LIS)*, www.lisdatacenter.org (multiple countries; calculated from LIS microdata by David Weisstanner on 2019-05-28). Luxembourg: LIS.

Notes on prefisc_gini, pretran_gini and postfisc_gini:

1. Incomes are measured at the household level, but the Gini indicators refer to individuals (each household is weighted by the number of household members aged 18-65).
2. Incomes are adjusted for household size by using the square root of the number of household members as equivalence scale.
3. Incomes are bottom-coded at zero. No top-coding is applied.
4. "Pre-fisc income" defined as labor income + capital income + private transfers (between households) + private pensions (voluntary, individual).
5. "Disposable income" defined as "pre-fisc income" + public social transfers – income taxes and social contributions.
6. "Pre-transfer income" defined as "disposable income" – public social transfers.

pretran_gini Gini index of pre-transfer income (after taxes, before transfers) among household members aged 18-65, in percent.

Codebook: Comparative Political Data Set, 1960-2017

Period covered: See variable 'prefisc_gini'.

Source: See variable 'prefisc_gini'.

postfisc_gini Gini index of disposable income (after taxes and transfers) among household members aged 18-65, in percent.

Period covered: See variable 'prefisc_gini'.

Source: See variable 'prefisc_gini'.

15. Demographic data

Note on demographic data:

1. Please consider that there may be breaks in series.

pop Total population, in thousands.
Period covered: 1960-2014.

Appendix

Appendix 1 Notes concerning the variables gov_right, gov_cent, gov_left

All entries were calculated on the basis of Schmidt and Beyer (1992), Woldendorp, Keman and Budge (1998), Ismayr (2003), Keesing's Archive, European Journal of Political Research, Neue Zürcher Zeitung, People in Power (<http://www.circa-uk.demon.co.uk/pip.html>), parliaments and governments database (<http://www.parlgov.org/explore>), Colberg et al. (1998), Casal Bértoa (2016) and the Parline database (<http://www.ipu.org/parline-e/parlinesearch.asp>). The classification of parties was done according to Schmidt (1996). If there was no classification by Schmidt, we classified parties using the following assignments (see Appendix 2):

- **'Left'** denotes social democratic parties and political parties to the left of social democrats
- **'Right'** denotes liberal and conservative parties
- **'Centre'** denotes centre parties, in particular Christian Democratic or Catholic parties. According to Schmidt (1996: 160), centre parties favor a "moderate social amelioration in a location to the left of conservative or conservative-neoliberal parties."

Appendix 2 Assignment of governing political parties to left, center, right

Australia

- left Australian Labour Party (*ALP*)
- center ----
- right Liberal Party (*LIB*)
Country National Party (*CNT*)

Austria

- left Socialist Party (*Sozialdemokratische Partei Österreichs, SPÖ*)
- center People's Party (*Österreichische Volkspartei, ÖVP*)
- right Freedom Party (*Freiheitliche Partei Österreichs, FPÖ*)

Belgium

- left Socialist Party Different (*Socialistische Partij Anders, SP.a/SPIRIT*) (until 2001: Flemish Socialist Party, in 2003 and 2007: electoral coalition with SPIRIT)
Francophone Socialist Party (*Parti Socialiste, PS*)
AGALEV (Greens, francophone)
ECOLO (Greens, flemish)
- center Christian Democrat & Flemish (*Christen-democratisch & Vlaams, CD & V*) (until 2001: Christian People's Party (CVP))
Democrat Humanist Centre (*Centre Démocrate Humaniste, CDH*) (until 2002: Christian Social Party (PSC))
Francophone Democratic Front (FDF)
New Flemish Alliance (*Nieuw-Vlaamse Alliantie, N-VA*) (former: Flemish/People's Union (VU))
Democratic Union (DU)
Wallon Rally (RW)
- right Liberal Party (LP)

Codebook: Comparative Political Data Set, 1960-2017

Open Flemish Liberals & Democrats (*Vlaamse Liberalen en Democraten, Open VLD*) (former: Party of Liberty and Progress (PVV))

 New Conservative Party (NCP) (*Hoshu Shinto*)

Codebook: Comparative Political Data Set, 1960-2017

Liberal Party (LP)
 People's New Party (PNP)
 (New) Sakigake Party (NPS)

Note:

According to its party manifesto, the Democratic Party of Japan (DPJ) is a center-left party. Since it is more to the center than to the left, we classified it as 'center' with regard to the party composition of government. However, for the 'elections' variables, we assigned this left-liberal party to the socialist party family ('social') which includes both traditional social democratic parties as well as blends of social-democratic and liberal parties.

Latvia

- left
 - Democratic Centre Party (since 1995, Democratic Party "Master" (*DPS Saimnieks*))
 - Latvian Social-Democratic Alliance (*Latvijas Sociāldemokrātu Apvienība, LSDA*)

- ### Appendix 3 Notes concerning votes and seats of political parties in national parliaments (lower houses in bicameral systems)

Codebook: Comparative Political Data Set, 1960-2017

As a general rule we included data on votes and seats for a party if it reaches at least 2% of votes in an election. If a party did not reach that threshold, data for this party is not included for that election (neither on votes nor on seats) and it receives a zero.

For example, the only Liberal Party in country X has 1991: 1.7% (votes), 2.0% (seats); 1994: 2.0% (votes), 1.7% (seats); 1998: 5.0% (votes), 4.5% (seats); 2000: 0.9% (votes), 0.8% (seats). The data entered for the Liberal Party are therefore:

votes:	seats:
liberal1	slibera1
1991: 0	1991: 0
1994: 2.0	1994: 1.7
1998: 5.0	1998: 4.5
2000: 0	2000: 0

Our classification of party families started from the work by Lane, McKay and Newton (Lane et al. 1997), which distinguishes between 11 party families. We added a party family 'right-populist parties and ultra right parties ("right")' which includes all the ultra-right parties according to Lane, McKay, Newton and right-populist parties according to the definition of populist radical right parties by Cas Mudde (2007: 22-3). Three features distinguish these parties from other parties: Nativism, authoritarianism and populism. Examples are given in Mudde (2007: 44) and Mudde (2013: 3). For Central and Eastern European countries, Janusz Bugajski (2002) was the main source for labelling, combined with additional national sources. As often acknowledged in the literature, parties in these areas frequently do not have a clear ideological stance, therefore their placement in distinct categories is not a straightforward process. For the sake of clarity, we made a tentative assignment of parties.

The national parties in a given family of parties were given consecutive numbers. If, for example, there are three political parties in the socialist spectrum of the party system, they were given the names social1, social2, and social3. The share of votes and seats were entered under these variable names for each party. This structure of the data set allows for various re-classification and aggregations.

If there is no party for a given variable, '0' is entered. For example, since the United Kingdom has no agrarian party, the variable 'agrarian' has the value '0' in the case of the United Kingdom. The share of votes are entered under the party variable name. The share of seats are entered under the party variable name, preceded by an 's' (for 'seats'). For example, in the case of Australia under 'social1' votes for the Australian Labour Party are entered; the variable 'ssocial1' denotes share of seats of the Australian Labour party.

In cases where data on votes are not available for parties separately due to electoral alliances we apply the following coding rules.

- If one party of the electoral alliance received more than 75% of the seats won by the electoral alliance, the total vote and seat share won by this alliance is entered under the variable name of this major party.
- If no party of the electoral alliance received more than 75% of the seats won by the electoral alliance, the total vote and seat share won by the alliance is entered under a new variable. If the alliance is not ideologically consistent we entered the corresponding values under the party family "allia".

The variable 'protest' refers to protest parties. We were restrictive in using this variable, since parties emerging as protest parties often change to a programmatic category, e.g. the German Green party. Thus we may apply retrospective changes if parties fit better into other categories. More recently, the 'protest' category may also comprise parties with EU-sceptic orientation, but without the nativism associated with the category 'right'.

Codebook: Comparative Political Data Set, 1960-2017

The variable 'others' refers to the percentage of total votes for all minor parties which received less than 2% of total votes each or for independent candidates. The variable 'sothers' refers to the percentage of total seats in parliament for all minor parties which received less than 2% of total votes or for independent candidates. Therefore, the variables on both votes and seats add up to 100%.

Due to a more complex party structure in post-communist countries, some other categories were added to the classification of Lane/McKay/Newton (1997), which only accounts for post-communist countries (see note on table below).

"Non-label" (nonlbl) is a residual category for those parties which could not be placed in any of the categories above. The "personalist" (person) label is used to designate parties created to support one candidate and which cannot be assigned an ideological label. "Pensioners" (pension) is a category comprised of parties of pensioners and persons with special needs. The "conservative" (conserv) label is used for party programs which emphasize both nationalist and religious values. The maximum number of variables is a result of the maximum number of parties within the family which reached at least 2% of the votes in an election in at least one country.

There is one major problem with these classifications: The classification is time-invariant. Some parties, however, changed their programs, goals and clienteles considerably over time. We do not adapt the classification to such changes systematically. However, in those cases where we are aware of major changes, we re-classified the party for the period after the change. Examples are the Swiss Peoples Party (SVP) or the Austrian Freedom Party (FPÖ). Both parties had been re-classified due to their change from an agrarian (SVP) or liberal (FPÖ) to a right populist party. Based on the literature we identified the years 1995 for the SVP and the year 1986 for the FPÖ as the time point when they switched from agrarian and liberal, respectively, to right-populist.

We recommend that users of the data set carefully consider whether our classifications fit their conceptual perspective and re-classify according to their needs.

Party family	Variable name

Appendix 4 Assignments of political parties in parliaments to party families

If there are numbers assigned to parties in the following list, they represent the identification numbers found in Mackie and Rose (1991).

Australia

- social1 1) Labour Party (ALP)
- social2 21) Democratic Labour Party
- agrarian1 7) Country Party, National Party
- conserv1 18) Australian Liberal Party
- conserv2 --- Family First
- liberal1 27) Australian Democrats
- liberal2 23) Australia Party
- liberal3 --- Palmer United Party (PUP)
- green1 --- Australian Greens
- right1 --- One Nation

Austria

- social1 1) Socialist Party (SPÖ)
- leftsoc1 Communist Party (KPÖ), (until 2005: comm1)
- comm1 5) Communist Party (KPÖ), (since 2005 leftsoc1)
- relig1 2) People's Party (ÖVP)
- liberal1 11) Freedom Party (FPÖ) (since 1986: right1)
- liberal2 17) Liberal Forum (LIF)
- liberal3 --- The New Austria and Liberal Forum (NEOS)
- liberal4 --- Team Frank Stronach (TS)
- protest1 12) Democratic Progressive Party
- protest2 --- List Dr Martin – For Democracy, Control and Justice (Martin)
- green1 15) Green Alternative
- green2 Liste Peter Pilz (Pilz)
- right1 11) Freedom Party (FPÖ) (until 1985: liberal1)
- right2 --- Alliance for the Future of Austria (BZÖ)

Codebook: Comparative Political Data Set, 1960-2017

Belgium

- social1 3) Socialist Party (since 1977 split into 30 and 31)
- social2 30) Socialist Party Different (SP.a) (until 2001: Flemish Socialist Party (SP), in 2003 and 2007: electoral coalition with SPIRIT)
- social3 31) Francophone Socialist Party (PS)
- leftsoc1 Workers' Party of Belgium-Left Opening! (PTB-GO!) (until 2008: comm2)
- comm1 10) Communist Party (KPB/PCB)
- comm2 --- Workers' Party of Belgium-Left Opening! (PTB-GO!) (since 2008: leftsoc1)
- relig1 1) Catholic Party (since 1965 split into 19 and 20)
- relig2 19) Christian Democrat & Flemish (CD & V) (until 2001: Flemish Christian People's Party (CVP); in 2007: alliance with N-VA)
- relig3 20) Humanist Democratic Centre (CDH) (until 2002: Francophone Christian Social Party (PSC))
- liberal1 2) Liberal Party (since 1971 split into 21 and 22)
- liberal2 21) Open Flemish Liberals & Democrats (Open VLD) (until 2007: Flemish Liberals & Democrats (VLD); former: Flemish Party of Liberty and Progress (PVV))
- liberal3 22) Reform Movement (MR) (former Francophone Liberal Reform Party (PRL); in 1995: Alliance with FDF; in 1999: Fédération PRL-FDF-MCC) (Francophone)
- liberal4 --- Vivant (joined the VLD in 2007)
- liberal5 5) Liberal/Socialist cartels
- liberal6 --- De Decker's List (LDD)
- protest1 32) ROSSEM/ROSSUM
- green1 26) ECOLO (Francophone)
- green2 27) Green (Flemish) (former: AGALEV)
- ethnic1 8) New Flemish Alliance (N-VA) (former Flemish/People's Union (VU))
- ethnic2 14) Francophone Democratic Front (FDF)
- ethnic3 18) Walloon Rally
- right1 28) Democratic Union for the Respect of Labour (UDRT/RAD)
- right2 33) National Front (FN-NF) (Francophone)
- right3 29) Flemish Interest (since 2004: Flemish Block)

Bulgaria

- social1 Democratic Alternative for the Republic (*Demokratichna Alternativa za Republika, DAR*)

- right2 42) Northern League (formerly Lombard League)
- allia1 2001: La Margherita (PPI, the Democrats, Italian Renewal, UDEUR)

Notes:

1994: Introduction of a new electoral system. 474 MPs of 630 are elected on the basis of a "single-ballot first-past-the post system"; the remaining 156 seats are distributed on the basis of a "proportional formula" (EJPR 1995: 398). Data on votes refer to the (proportional) list votes, data on seats refer to the total of seats gained by the party (proportional plus plurality system). However, by the end of 2005, a party-list proportional representation system was re-introduced.

Japan

- social1 35) Social Democratic Party (Socialist Party) (SDP)
- social2 44) Democratic Socialist Party (DSP)
- social3 --- Democratic Party of Japan (DPJ)
- social4 Constitutional Democratic Party of Japan (*Rikken Minshutō, CDP*)

Codebook: Comparative Political Data Set, 1960-2017

- comm1 31) Japanese Communist Party (JCP)
- conserv1 43) Liberal Democratic Party (LDP)
- conserv2 48) Japan Renewal Party (Shinsei To) (JRP)
- conserv3 49) Japan New Party (JNP)
- conserv4 --- New Frontier Party (NFP) (Merger of JRP, JNP, DSP, and Komei in 1994. In 1997, NFP broke up into Democratic Political Party, Komeito and Liberal Party.) Liberal Party (LP) (successor of NFP after its break-up in 1997; joined DP in 2003)
- conserv5 --- (New) Sakigake Party (Splinter from LDP, 1993)
- conserv6 Party of Hope (*Kibō no Tō, TPH*)
- relig1 45) Komei Party, Komeito (Clean Government Party) (CGP)
- liberal1 46) New Liberal Club (belongs to 43 before 1979 and after 1986)
- liberal2 --- Your Party (YP)
- liberal3 --- Japan Innovation Party (JIP)
- green1 --- Tomorrow Party of Japan (TPJ)
- right1 --- Japan Restoration Party (JRP)
- right2 --- Party for Future Generations (PFG)

Note:

1996: Introduction of a new electoral system. 300 of 500 MPs (since 2014, 295 of 475) are elected in "single-seat constituencies with non-transferable single ballot and simple plurality", the remaining 200 (180, since 2000) seats are distributed according to "proportional representation" (EJPR 1995: 412). Data on votes are arithmetic means of votes in both systems. For example: LDP received 38.6% of votes in single-seats constituencies and had had a share of 32.8% in the proportional system. The arithmetic mean is: $(38.6 \cdot 300/500) + (32.8 \cdot 200/500) = 36.28 = 36.3$.

Appendix 5 Notes concerning the variables for consensus democracy

Ifirstp: Lijphart first dimension. Proxy variable.

This variable is a time-variant proxy for Lijphart's first dimension 'parties-executives'. The data is composed of the moving averages of 10 years of four indices:

- The number of effective parties in parliament (*effpar_leg*).
- The absence of minimal winning and single-party majority cabinets (calculated from *gov_type* with (1) single-party majority government and (2) minimal winning coalition coded as '0', otherwise '1').
- The proportionality of electoral systems (variable *dis_gall* multiplied by [-1]).

Codebook: Comparative Political Data Set, 1960-2017

- A measure for cabinet dominance, calculated by taking the average cabinet duration (see Lijphart 1999: 129-134), which we measured by the number of changes in government per year (*gov_chan*).

For example, the value of *effpar_leg* for 1969 in our calculations is the arithmetic average for the annual data of *effpar_leg* for 1960-69, the value for 1970 is the average for the period 1961-70, etc.

These moving averages of the four indices were z-standardized and added up. The sum was again z-standardized, which yields the value of the proxy variable. For example, the data entered for 1969 is the z-standardized sum of the z-standardized moving averages for the years 1960-69.

The z-standardization was done across nations for each time point. For example, the z-scores for number of effective parliamentary parties in 2009 were calculated on the basis of the data for the 36 countries in 2009.

We deliberately did not include the index of interest group pluralism, which in our view does not measure the extent of compromise and negotiation between political elites on the level of parliaments and parties. It rather taps dimensions of corporatism and varieties of capitalism. In order to measure the fit of this proxy variable with Lijphart's original variable, we correlated the mean of *lfirstp* for the years 1981 to 2010 with *lfirst* in 1981 (i.e. Lijphart's first dimension measured for the years 1981 to 2010). The correlation is 0.902 (significant at $p < 0.001$, $n=24$).

lfirstpi: Lijphart first dimension. Proxy variable institutions.

lfirstpb: Lijphart first dimension. Proxy variable behavior.

Lijphart has been criticized for mixing up the effects of societal cleavages (such as the number of parties) and institutions (such as electoral rules) with elite behavior such as coalition building and cabinet dominance (Ganghof 2005). Therefore we calculated separate proxy variables both for institutions (*lfirstpi*) based only on the variables 'number of parties' and 'electoral disproportionality' and for behavior (*lfirstpb*) based only on the variables 'cabinet dominance' (as measured in *lfirstp*) and 'absence of minimal winning coalitions and single-party majority governments'. The calculation as z-scores of moving averages is the same as with regard to *lfirstp*. The arithmetic means for the period 1969 to 2017 of *lfirstp* are correlated with the means of *lfirstpi* 0.786 and with the means of *lfirstpb* 0.799; both correlations are significant at $p < 0.001$ ($n=36$). The correlation between the means of *lfirstpi* and *lfirstpb* (1969-2017) is 0.258 and not significant at $p < 0.05$ ($n=36$).
